PROJECT REPORT

To-Do List Application

1. Introduction

In today's busy life, people often forget their daily tasks. This project aims to solve this problem by creating a simple To-Do List application that helps users manage their tasks efficiently.

2. Problem Statement

People find it difficult to remember and organize their daily activities. There is a need for a simple system to store and manage tasks.

Your paragraph text

3. Objective

- To create a simple task management system
- To help users add, view, and delete tasks
- To improve productivity

4. Technology Used

- Python
- VS Code

5. Working of the Project

The application provides a menu with options to add tasks, view tasks, and delete tasks.

- Users can add tasks
- View all tasks
- Remove completed tasks

The program runs in a loop until the user chooses to exit.

6. Features

- Easy to use
- Simple interface
- Fast performance

. Output

(Add screenshots of your program here)

8. Challenges Faced

- Understanding basic Python concepts
- Handling user inp

9. Conclusion

This project helped in understanding basic programming and problem-solving skills. It is useful for managing daily tasks effect

10. Future Scope

- Add GUI (Graphical Interface)
- Add task deadlines
- Store tasks permanently
